SHARED SERVICES CANADA
DEPARTMENTAL RESULTS REPORT

Shared Services Canada plays a role in the Government of Canada's ability to deliver programs and services that improve the lives of Canadians, their families and their communities.

Support to WeatherCAN Application for Canadians

Supported Environment and Climate Change Canada in developing a new weather data collection application. Existing and new weather data is collected from systems managed at SSC using the processing power of our supercomputers.

Emergency Response

Provided IT support for emergency responses to natural disasters, such as floods in Eastern Ontario, wild fires in British Columbia and tornadoes in Ottawa, Ontario.

G7 Summit

Ensured the Summit was properly equipped with IT infrastructure for all office telecommunications, radio network for security forces, as well as voice, data and broadcast circuits for international delegations and media.

Improved Digital Services to Canadians

Established secure connections between network and cloud service providers to protect data and applications from cyber attacks and preserving the integrity of electronic information.

New State-of-the-Art Data Centre

Developed modern, cutting-edge enterprise data centres which allow our partners to deliver services safely and with minimal interruption.

Improved Support to the RCMP

Established the Policing Infrastructure Operations directorate which provides a single point of contact for the RCMP, as well as dedicated teams for each RCMP area that SSC supports.

Encouraging Women and Girls to Pursue IT Careers

Collaborated with government and other organizations to increase the number of women and girls involved in IT and science, technology, engineering and math (STEM) fields.

Budget 2018

Developed a strategic agenda that aligns SSC priorities with the resources provided in Budget 2018. The Government of Canada announced an investment of $2 billion at SSC over six years.
